# Question

If  $\mathbf{X} \cdot \mathbf{A} = 0$ ,  $\mathbf{X} \cdot \mathbf{B} = 0$ , and  $\mathbf{X} \cdot \mathbf{C} = 0$  for some non-zero vector  $\mathbf{X}$ , then  $[\mathbf{A} \ \mathbf{B} \ \mathbf{C}] = 0$ .

# Theoretical Solution

$$\mathbf{X} \cdot \mathbf{A} = 0 \quad (1)$$

$$\mathbf{X} \cdot \mathbf{B} = 0 \quad (2)$$

$$\mathbf{X} \cdot \mathbf{C} = 0 \quad (3)$$

From (1), (2) and (3),

$$\mathbf{A}^\top \mathbf{X} = \mathbf{B}^\top \mathbf{X} = \mathbf{C}^\top \mathbf{X} = 0 \quad (4)$$

# Theoretical Solution

This forms the set of equations

$$\begin{pmatrix} \mathbf{A}^\top \\ \mathbf{B}^\top \\ \mathbf{C}^\top \end{pmatrix} \mathbf{X} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix} \quad (5)$$

$$(\mathbf{A} \ \mathbf{B} \ \mathbf{C})^\top \mathbf{X} = \mathbf{0} \quad (6)$$

For a homogeneous set of equations to have non-trivial solution  $\mathbf{X}$ , the coefficient matrix is singular.

$$\implies (\mathbf{A} \ \mathbf{B} \ \mathbf{C})^\top \text{ is singular.}$$

$$\implies (\mathbf{A} \ \mathbf{B} \ \mathbf{C}) \text{ is singular since } (\mathbf{A} \ \mathbf{B} \ \mathbf{C}) \text{ is square.}$$

$$\therefore [\mathbf{A} \ \mathbf{B} \ \mathbf{C}] = 0$$

Hence, the given statement is true.

# Example

Let

$$\mathbf{X} = \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}, \mathbf{A} = \begin{pmatrix} 1 \\ -1 \\ 0 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 1 \\ 0 \\ -1 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} 0 \\ 1 \\ -1 \end{pmatrix}$$

$$\mathbf{A}^\top \mathbf{X} = \mathbf{B}^\top \mathbf{X} = \mathbf{C}^\top \mathbf{X} = 0 \text{ for this example.} \quad (7)$$

$$[\mathbf{A} \ \mathbf{B} \ \mathbf{C}] = \begin{pmatrix} 1 & -1 & 0 \end{pmatrix} \left( \begin{pmatrix} 1 \\ 0 \\ -1 \end{pmatrix} \times \begin{pmatrix} 0 \\ 1 \\ -1 \end{pmatrix} \right) \quad (8)$$

$$[\mathbf{A} \ \mathbf{B} \ \mathbf{C}] = \begin{pmatrix} 1 & -1 & 0 \end{pmatrix} \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix} \quad (9)$$

$$[\mathbf{A} \ \mathbf{B} \ \mathbf{C}] = 0 \quad (10)$$
